

May 15, 2011

After Installing the Fitch Fuel Catalyst on the f/v Kristina we noticed an immediate improvement in the way the engine sounded and a 50% or more reduction in exhaust smoke.

After conducting a test to measure fuel savings on the 25kw gen set, we discovered an 8% savings with the fuel passing through the Fitch only once. We chose to test the gen set because the load could be made exactly identical for baseline and test with the Fitch.

Deutz F-3L gen-set engine

f/v Kristina

We also noted that the diesel stove burned cleaner and hotter.

We would recommend this product to anyone.
